Modelos matemáticos de epidemias

Isaias Martinez Vieyra A00988525 Carlos Eduardo Muñoz González A01332264

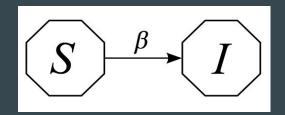

Modelo matemático "SI"

Variables:

```
S(t) Individuos susceptibles
I(t) \text{ Individuos infectados}
N=S(t)+I(t) \text{ Dada una población fija}
\beta=\text{Tasa de infección}
```

```
\frac{dS}{dt} = -\lambda I(t)S(t)/N
\frac{dI}{dt} = \lambda I(t)S(t)/N
```

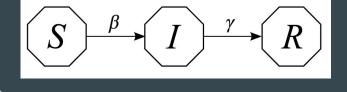

```
def SI(S, I, N):
    t = 0
    while (t < 5_000):
        S, I = S - beta * (S * I / N), I + beta * ((S * I) / N)
        sus.append(S)
        inf.append(I)
        prob.append(p)
        t = t + 1</pre>
```

Modelo matemático "SIR"

Variables:

- S(t) Individuos susceptibles (personas)
- I(t) Individuos infectados (personas)
- R(t) individuos curados de la enfermedad (personas)
- β = tasa de infección (personas * días)
- γ = tasa de recuperación (días)

Dada una población fija N=S(t)+I(t)+R(t)

```
def SIR(sir, t):
    S = - (beta * sir[0] * sir[1])/N
    I = (beta * sir[0] * sir[1])/N - gamma * sir[1]
    R = gamma * sir[1]
    SIR = [S, I, R]
    return SIR
```

$$egin{aligned} rac{dS}{dT} &= -eta SI_{\parallel} \ rac{dI}{dT} &= eta SI - \gamma I \ rac{dR}{dT} &= \gamma I \end{aligned}$$

Caso 1 "Mutación de Virus" SI

Definimos variables

$$N = 7,500,000,000$$

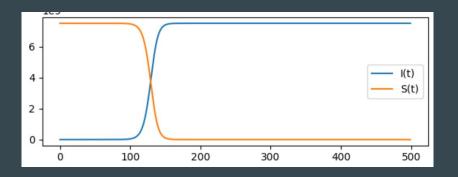

$$I = 1$$

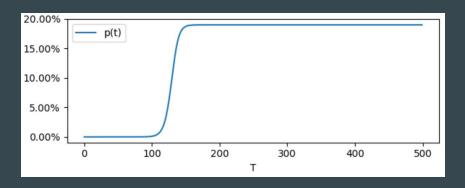

$$I = 1$$
 $S = N - I$

$$\beta$$
 = 0.19 "Moderado" D = 500 días

Resultados:

SI

Caso 1 "Mutación de Virus" SIR

Definimos variables

N = 7,500,000,000

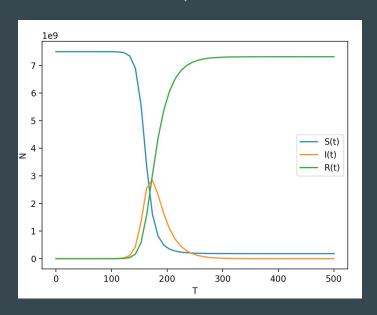

I = 1

S = N - I

 β = 0.19 "Moderado"

 $\gamma = 0.05$

D = 500 días

Caso 2 "Bioterrorismo" SI

Definimos variables

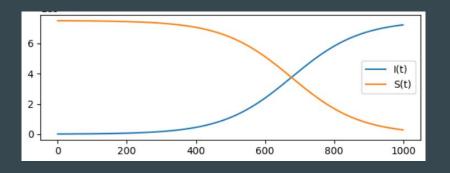

N = 7,500,000,000

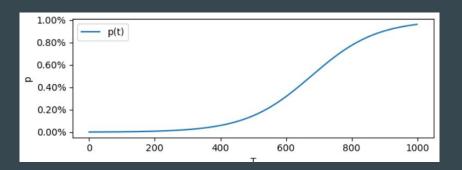

I = 8,800,000 S = N - I

 β = 0.01 "Extremadamente bajo"

D = 1000 días

Población: CDMX

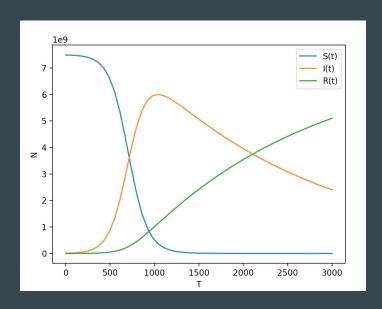

Caso 2 "Bioterrorismo" SIR

Definimos variables

```
N = 7,500,000,000   I = 8,800,000   S = N - I   \beta = 0.01 "Muy bajo"   \gamma = 0.0005 "extremadamente bajo"   D = 3000 días
```

• Población : CDMX

Caso 3 "Accidente de Manipulación" SI

Definimos variables

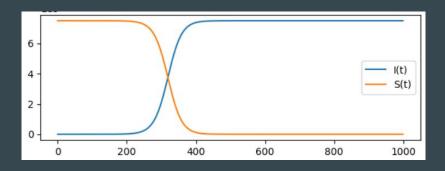

N = 7,500,000,000

 $\overline{I} = 1.217$ $S = N - \overline{I}$

 $\beta = 0.05$ "bajo"

D = 1000 días

Población : Tupátaro Gto

Caso 3 "Accidente de Manipulación" SIR

Definimos variables

N = 7,500,000,000

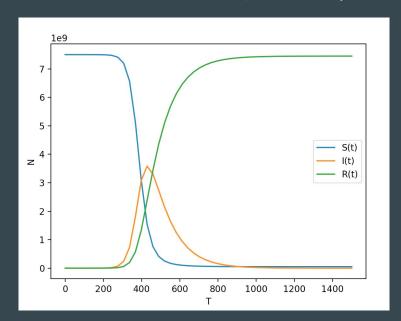

I = 1,217

S = N - I

β = 0.05 "bajo" γ = 0.01 "muy bajo"

D = 1500 días

Población: Tupátaro Gto

Caso 4 "Virus Animales" SI

Definimos variables

$$N = 7,500,000,000$$

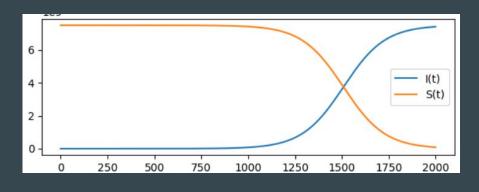

$$I = 1,217$$

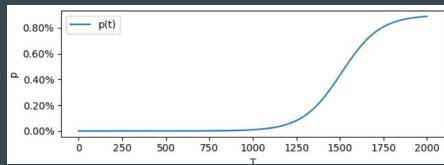

$$I = 1,217$$
 $S = N - I$

$$\beta = 0.05$$
 "bajo" $D = 2000 \text{ días}$

$$D = 2000 días$$

Población: Tupátaro Gto

Caso 4 "Virus Animales" SIR

Definimos variables

N = 7,500,000,000

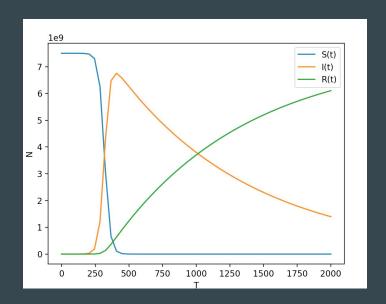

I = 1,217

S = N - I

 $\beta = 0.05$ "bajo" $\gamma = 0.001$ "extremadamente

bajo" D = 2000 días

Población: Tupátaro Gto
